

Abstract

Holding device for the arrangement of at least one optical component (3) in front of a laser light source (5) of a laser unit (1), comprising a first holding part (8) to which at least one optical component (3) is attached, the holding device (2) furthermore comprising a second holding part (9) which is attached to one part of the laser unit (1), and the first holding part (8) being attached to the second holding part (9). Furthermore this invention relates to an arrangement with such a holding device (2) and a process for producing this arrangement.
